<th>Item:</th>
<th>3. RECEIVE A PRESENTATION FROM NV ENERGY REGARDING SAFETY AWARENESS AND CONFLICT AVOIDANCE (FOR POSSIBLE ACTION)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Comments:</td>
<td>Mr. Shawn Arnold, NV Energy, began by saying that entities and utilities should carry out their projects with a mindset of safety awareness and undertake actions to avoid conflicts. He set forth the presentation’s goal as one of assisting the local jurisdictions and other utilities by sharing information about the electrical system, NV Energy’s standards regarding safety compliance, and best practices on project coordination. Following a detailed PowerPoint presentation [attached], Mr. Arnold outlined the different parts of an electrical system. He mentioned that there are two different types of lines—transmission and</td>
</tr>
</tbody>
</table>
distribution—for conveying electricity. The NV Energy representative stated that a thorough understanding of each electrical system and the nature of power production was important in terms of safety. In this regard, assessments of both above ground and below ground facilities and ensuring adequate safety clearances play key roles. Mr. Arnold also informed meeting attendees that hitting or contacting high voltage lines can be incredibly dangerous and highly problematic in terms of carrying out work.

***NOTE: A Regional Project Coordination Committee member arrived at the meeting at 9:06 a.m.***

Mr. Arnold continued, encouraging advance coordination to avoid conflicts. He provided examples of proactive actions including requesting redlines/as-builts and an examination of the actual distribution and transmission underground and overhead facilities. He noted that entities and utilities should utilize the “Call Before You Dig” and “Call Before You Crane” services. Regarding NV Energy facilities, entities and utilities should submit plans for pre-design and conflict review to the utility company.

Mr. Arnold shared that NV Energy’s guidelines, processes, and standards were created to eliminate unsafe situations and conflicts as much as possible. The company is available to provide guidance to entities and other utilities in this regard. He also encouraged meeting attendees to utilize the Regional Project Coordination Committee GIS Project Map.

Next, the NV Energy representative displayed slides regarding the MGM Underground Cable Replacement Project. He described the work for this three-part project as significant. He detailed that the current line would be taken out and connected to an overhead line. The line must be protected during this process. He noted that this is a temporary measure. NV Energy will install a new underground conduit that will require that the line be pulled out, cut, replaced, and connected from one transmission riser to another transmission riser. The work and other efforts are expected to commence in the timeframe of October/November 2019 and continue until in approximately March/April 2020. Mr. Arnold mentioned that NV Energy has already been collaborating with numerous entities, utilities, and adjacent property owners regarding the project.

Mr. Jacob Snow, Resort Corridor Mobility Association, asked for confirmation that NV Energy was not planning to undertake road closures in relation to the MGM Underground Cable Replacement Project. Mr. Arnold answered that full closures were not planned, but partial closures would take place. Regarding the latter, he explained that this would be necessary in order to make way for the pulling up of the underground cable. Mr. Arnold added that NV Energy was planning to carry out most of this work in the evening.

In closing, Mr. Mark Sorensen, City of Las Vegas (Las Vegas), recounted a story to highlight the importance of safety awareness and coordination. He stated that a Las Vegas project involved work near some NV Energy high voltage transmission lines. Mr. Sorensen had expressed concern about the clearance of these lines and talked to NV Energy about this matter. The parties closely coordinated on this matter. In an abundance of caution, NV Energy shut down the line to ensure that the city’s work could be done safely. Mr. Sorensen noted that if the work had begun and it was discovered that the clearance was not adequate, it would have taken considerable time and money to carry out a re-design of the project. Mr. Arnold agreed with Mr. Sorensen that safety awareness and coordination were essential. He concluded his presentation by stating that NV Energy sends appropriate documentation to all entities to clearly outline clearances and other requirements that must be met.

<td><strong>Comments:</strong></td>
<td>Mr. Joe Damiani, Manager of Engineering for the Regional Transportation Commission of Southern Nevada (RTC), stated that the RTC would be submitting an item requesting authorization to participate in the review of private development to the RTC Board of Commissioners (RTC Board). Mr. Damiani understood that the item would be featured in the RTC Board’s October 2019 agenda. Once the agency is authorized to participate, private development projects will be added to the Regional Project Coordination Committee (RPCC) GIS Project Map. Next, Mr. Damiani talked about how RPCC members could access information about other projects on the RPCC GIS Project Map. He reminded the Committee members that when they clicked on a project in the RPCC GIS Project Map, they could see other projects within a certain mile range of that work. He demonstrated this functionality and noted that the titles of the projects in the buffer zone were displayed in a panel to the left of the digital map. The Manager of Engineering also mentioned that the RTC GIS team was working to implement a new “show all new projects” feature for the RPCC GIS Project Map. Ms. Abi Mayrena, Clark County Regional Flood Control District (CCRFCD), understood that CCRFCD was scheduled to present at the next RPCC meeting. Mr. Damiani acknowledged her comment, stating that an item to that effect would be on the next RPCC agenda.</td>

Safety Awareness and Conflict Avoidance

Recognize different parts of an electrical system:
- There are two different types of electric lines for transporting electricity.
  - Transmission lines transport high voltages for larger distances to substations, where the voltages are stepped down to lower voltages.
  - Distribution lines transport those lower voltages for shorter distances to ground and pole mounted transformers, which step down the voltages to be distributed locally.
Safety Awareness and Conflict Avoidance

Recognize different parts of an electrical system:

- Understand the differences between distribution and transmission facilities for both overhead and underground. **Do Not Assume.** Verify by obtaining facility redlines from both departments.
- Since most projects are usually focused on powering their developments through the distribution system, transmission facilities can be overlooked. Conflicts with the overhead or underground systems can cause delays, additional costs, and safety issues.
- It is critical to meet safety clearances. Just because it looks harmless does not mean it is. Ignoring safety has a high potential for risk of injury and can be fatal.
- Understand the implications for hitting and contacting these high voltage lines, especially transmission underground lines.

Safety Awareness & Conflict Avoidance

Coordinate in advance to avoid conflicts:

- Request redlines/as-builts and field meets of distribution and transmission underground & overhead facilities
- Coordinate your work prior to potholing near existing underground facilities
- “Call Before You Dig” so line locators will mark underground facilities and possibly request survey information of existing transmission facilities
- “Call Before You Crane” to meet NV Energy personnel on-site to discuss safe work procedures and clearances. **“Call Way in Advance Prior to Construction.”**
- Schedule scoping studies, and pre-design meetings upfront to avoid unexpected issues and obtain required approvals
**Safety Awareness & Conflict Avoidance**

Submit plans for pre-design and conflict review:

- Refer to distribution’s & transmission’s guidelines and standards during design as to avoid conflicts and relocation

- Submit improvement plans to distribution and transmission per their different processes and requirements.
  - Transmission will review improvement plans as early as 30% to begin the review process.
  - Design improvements based on NV Energy’s standards in order to prevent safety issues, violations, and contacts of electrical lines.

---

**Safety Awareness and Conflict Avoidance**

**Lesson learned:**

- NV Energy’s guidelines, process, and standards exist to assist in eliminating conflicts and unsafe situations as much as possible.

- NV Energy can help to educate in conflict avoidance from beginning to end.

- It takes coordination efforts to prevent mishaps and undesirable situations during design and construction.

- Uploading projects and utilizing the RTC Regional Project Coordination Committee Avoidance Map is also a great way to start coordination efforts, attempt to eliminate conflicts, and avoid overlapping construction issues, etc.
